

Suspected Drug Intoxication Deaths in Marion County, Indiana

Background

This report is created in coordination between the Marion County Public Health Department (MCPHD) and the Marion County Coroner's Office (MCCO). This report was supported by the Centers for Disease Control and Prevention (CDC) of the U.S. Department of Health and Human Services (HHS) as part of Overdose Data to Action: LOCAL (CDC-RFA-CE-23-0003). The contents are those of the authors and do not necessarily represent the official views of, nor an endorsement by, CDC/HHS or the U.S. Government. All data in this report was collected and provided by the MCCO.

Purpose

The goal of this report is to provide more timely statistics regarding suspected drug intoxication deaths to the public and those involved in prevention or harm reduction efforts focused on decreasing the number of drug intoxication deaths in the county.

Important Disclaimer: All cases included in this report are *suspected* drug intoxication deaths. These deaths are still under investigation by the MCCO and are subject to change as toxicology reports are completed. Confirmed statistics will be included in the MCCO's next annual report.

Suspected Drug Intoxication Deaths in Marion County, Indiana

Summary of Suspected Drug Intoxication Deaths | Q2 2025

Q2 2025

115 Deaths

Q2 2024

124 Deaths

Percent Change

▼ 7.3%

From previous year

Weekly Trends

Out of the 115 suspected drug intoxication deaths, 14 (12%) deaths occurred between April 1st – 7th, which accounted for the most deaths by week for Q2 2025.

Distribution by Age Group

The average age was 45 years old, the youngest decedent was 18 years old and the oldest was 78 years old.

Distribution by Sex

66%**34%**

Distribution by Race & Ethnicity

Suspected Drug Intoxication Deaths in Marion County, Indiana

Distribution by Place of Death

Out of the 115 suspected drug intoxication deaths, 54 (47%) deaths occurred at the decedent's residence.

*Other locations include a place of business and vacant house/apartment, or structure.

Distribution by Marital Status

Out of the 115 suspected drug intoxication deaths, 66 (57%) decedents had never been married.

History of Rehabilitation?

History of Illicit Drug Use?

Suspected Drug Intoxication Deaths in Marion County, Indiana

Distribution by Education Level

Out of the 115 suspected drug intoxication deaths, 56 (49%) decedents had received a high school diploma/GED or higher.

Mental Health History

Out of the 115 suspected drug intoxication deaths, 40 (35%) decedents had a documented mental health history. The table below shows how many decedents were diagnosed with specific mental illnesses.

Diagnosis	Count* (n=40)	Percent
Depression	29	73%
Anxiety Disorder (includes generalized anxiety)	25	63%
Bipolar Disorder	12	30%
Post Traumatic Stress Disorder (PTSD)	6	15%
Attention-Deficit/Hyperactive Disorder (ADHD)	3	8%
Schizophrenia or schizoaffective disorder	3	8%
Other (Includes unspecific mood disorder, obsessive compulsive disorder, & borderline personality disorder)	3	8%

* A single decedent can be diagnosed with more than one mental illness, so the total count is higher than the number of suspected decedents with a mental illness.

Toxicology Results

Out of the 115 suspected drug intoxication deaths, 101 cases had completed toxicology results by the time of this report. The top five most commonly found substances in the toxicology results were fentanyl (70%), methamphetamine (39%), cocaine (38%), benzodiazepines (15%), and acetyl fentanyl (13%). Additionally, 71 (70%) of the completed toxicology results detected either fentanyl or a fentanyl analog.

See the table below for a full breakdown of all substances identified through toxicology. The last column indicates whether the presence of this substance increased (▲), decreased (▼), or stayed the same (—) as compared to toxicology in Q1 2025. Please note that changes between quarters may not be indicative of an ongoing trend and will need to be observed over a longer timeframe.

Substance	Count* (n=101)	Percent	Compared to Q1 2025
Fentanyl	71	70%	▲
Methamphetamine	39	39%	▲
Cocaine	38	38%	▲
Benzodiazepines (includes alprazolam, 7-aminoclonazepam, bromazolam, clonazepam, & diazepam)	15	15%	▲
Acetyl fentanyl**	13	13%	▼
Other (includes ketamine, cyclobenzaprine, meta-chlorophenylpiperazine, GHB, psilocybin, etc.)	9	9%	▲
Opiates (Other) (includes oxycodone & morphine)	8	8%	▲
Ethanol/Alcohol	7	7%	▼
Antihistamines (includes diphenhydramine & hydroxyzine)	5	5%	—
Xylazine	4	4%	▼
Gabapentin	4	4%	▼
Fluorofentanyl**	3	3%	▼
Methadone	3	3%	▼
Synthetic Cannabinoids (includes MDMB-4en-PINACA)	3	3%	—
Carfentanil**	1	1%	▼
Antidepressants (includes trazodone)	1	1%	▼
4-ANPP**	1	1%	—
Norfentanyl**	1	1%	—
Heroin	1	1%	—
Butyryl fentanyl**	1	1%	▲

* Multiple substances can be found in a single toxicology report for a decedent. Therefore, the total count in this table is higher than the number of suspected decedents.

** Substance is a fentanyl analog, which is an opiate created by altering the basic chemical structure of fentanyl. This allows fentanyl analogs to produce a similar pharmacological effect to fentanyl while containing a slightly different chemical structure.

Drug Overdose Data Dashboard

For more overdose-related information, please visit the Indiana Department of Health's (IDOH) [Drug Overdose Data Dashboard](#).

In the dashboard, IDOH has provided county and state level data that includes details on county response, opioid prescriptions, hospital discharges, and drug intoxication death data.

Emerging Substance(s)

Through syringe surveillance, MCPHD has detected the following new or emerging substances:

Metonitazene (increase detected Q2 2025) – A nitazene (synthetic opioid developed as a morphine alternative but never approved for human use) suspected to be 2x more potent than fentanyl and 30-200x more potent than morphine

Carfentanil (reached peak in Q2 2025) – A fentanyl analog that is 10,000 times more potent than morphine and 100 times more potent than fentanyl

Lidocaine (increase detected between Q1-Q2 2025) – A local anesthetic that creates a numbing effect and is commonly used as a cutting agent for cocaine. Lidocaine has increased in county syringe data by 11% between Q1 and Q2 2025.

MCCO Annual Report

Please use the link below to access the MCCO's annual reports, which contain more information on all deaths that occur in Marion County.
